

WEB Tacho Remote file synchronization

[Main Page](#) > [Software & Applications](#) > [WEB Tacho](#) > **WEB Tacho Remote file synchronization**

Remote file synchronization

All downloaded tachograph files (all formats) that are on the server can be synchronized with your FTP server.

To create file synchronization go to “Remote file synchronization” from the menu marked by *number 1* in the picture and press “**Add New**” marked by *number 2* in the picture.

In an open window, choose and type the necessary information.

ROW	DESCRIPTION
Group	Choose the group for which files will be synchronized
Name	Enter the name of synchronization
Interval	Defines interval of files validity which needs to be synchronized.
Vehicle name	Choose file name for synchronized files
Host	Enter FTP IP address
Port	Enter FTP Port
Path	Enter the path where files will be resent
Tachograph file format	Select in which format files will be downloaded
User	Enter the username/login for FTP
New password	Enter the password for FTP

When *Remote file synchronization* is configured, WEB TACHO server will connect to your FTP server and will create corresponding folders:

Your entered the path, Group name, Client name, Vehicle name, where tachograph files will be transferred.

Note: the last folder name depends on selected *Vehicle name* field. Folder can be named by *Vehicle name* or by *IMEI*.
