×

If you are not using Bluetooth, **please consider turning it off** or **change Bluetooth** PIN to remove potential risks.

If you are using Bluetooth® we strongly recommend **using AES encryption** for enhanced security.

### How to connect OBD II Bluetooth® Dongle to FMB device

#### Solution applies for these FM devices

<u>FMB900 FMB920 FMB110 FMB120 FMB122 FMB125 FMB202 FMB204 FMB962 FMB964 FMT100</u> <u>FMM125 FMM130 FMU125 FMU130 FMC125 FMC130 FMB910 FMC920 FMM920 FMB130</u> <u>FMB140 FMB230 FMB225 FMC230 FMM230</u>

#### **Bluetooth® settings configuration**

```
×
```

The following are the instructions on how to easily prepare a Bluetooth® Dongle connection to the FMB device. First, we need to configure FMB device Bluetooth® settings. These are the required steps:

- Go to Bluetooth® section similarly to as shown in the figure to the right (position 1).
- Turn on BT Radio by pressing Enable (visible) (position 2). "Local name" (position 3) will automatically be "FMB1YX\_last 7 imei digits", you can leave it or type your own name.
- Set *Security Mode* (position 4) to PIN only or None (you could select PIN + MAC list or MAC list only security mode but in this case you need to type external device MAC address in *Authorized Devices MAC List* (position 7).

- Set connection mode to OBDII (position 5).
- Set *External Name* as your Bluetooth® OBD II device name for proper device identification and connection to it. In this example the OBDII device name is "DONGLE", at least 2 characters are needed to recognize it and connect to it. For better and faster adapter identification in the network, you could enter a full device name. You could check your OBDII adapter Bluetooth® name by scanning nearby Bluetooth® devices using a mobile phone or a computer with a Bluetooth® adapter.
- Go to OBD II in main menu and select priority and others parameters visible in the following figure.

×

- After all these steps press Save to device to save configuration (position 8 in the top right hand figure).
- Now you can disconnect FMB device from the configurator.

#### **Connecting to Bluetooth® OBD II dongle**

After this configuration OBDII dongle can be connected to FMB device. Turn on the ignition, then turn on its Bluetooth® connection. For pairing follow dongle instructions. OBDII device notification about paired Bluetooth® connection depends on the specific model. If you later restart FMB device it will automatically reconnect to this dongle.

#### Supported Bluetooth® OBD II dongles

FMB module works with Bluetooth® OBD II dongles which are based on ELM327 or STN1110 chips. Comparison of these chips is presented in the image below:
