## Connection scheme shows the use of a resistor. What power resistor should I choose?

 $\underline{\text{Main Page}} > \underline{\text{Frequently Asked Questions - FAQ}} > \underline{\text{Connection scheme shows the use of a resistor.}}$  What power resistor should I choose?

CAN Adapters use low current signals. Regular low power resistors will be sufficient for the application. We recommend not exceeding more than 0.5W as higher power levels are unnecessary.
