EYE APP 1.2.2-89

Search device with QR scan

Now you can find devices with QR scan by pressing scan button  and scanning device QR code.

Customized Sensor Selection

Users can customize their device by selecting only the sensors they require. This allows users to specify which sensor information is read and advertised, ensuring power-efficient data collection and transmission.

Auto-Disconnect Timer

To enhance user privacy and save energy, we've introduced an auto-disconnect feature. After 2 minutes of inactivity, users will be automatically disconnected from the device. Before disconnection, you will have the option to maintain the connection.

Visible battery voltage

Eye App now provides a clear and convenient readout of the battery's voltage level, keeping users informed about their device's power status.

12 characters name

Users can now assign names of up to 12 characters, enabling them to configure their device with a full MAC address as the name.
