Installing CAN adapter with FM6300 device

Installing LV-CAN200/ALL-CAN300

You can watch <u>LV-CAN200/ALL-CAN300</u> installation video in our YouTube channel <u>here</u> or follow connection instructions below.

Tools needed for installation

- LV-CAN200/ALL-CAN300
- Connection scheme (Please contact Teltonika Sales Representative and provide information about **vehicle manufacturer**, **model** and **year**.
- FM6300 device
- Pliers

- Quick splice connectors (If vehicle CAN bus wires are very thin CAN adapter wires should be connected directly)
- Plastic pry tool
- Zip ties

Installation steps

- 1. Be ready with a vehicle **connection scheme** that you have received from a Teltonika Sales Representative.
- 2. **Check the scheme** for the current vehicle connection. Look for connectors matching **PINs numbers** and colors (maybe different) according to connection scheme.
- Connect CAN adapter with FM6300:
 Connect CAN adapter's MINI USB to USB of FM6300.
- 4. Connect CAN adapter CAN wires (CAN L, CAN H) as specified in connection scheme.

► Do not swap CAN L and CAN H lines. Not all CAN adapter wires may be used in vehicle.

5. Connect CAN adapter **positive** and **ground** wires to the vehicle power supply lines or near FM6300 power wires.

► Do not swap power supply lines. Make sure that voltage does not exceed 30V.

- 6. Switch vehicle **ignition to ACC** position. CAN adapter **LED diode** on the back should start **blinking**.
- 7. Configure CAN adapter to read CAN bus data or control vehicle by setting its **program number** <u>CAN Adapter configuration</u>

×

LV-CAN200/ALL-CAN300 connection example. This is not a connection diagram for your vehicle. Every vehicle has a specific scheme.

Installing LV-CAN200/ALL-CAN300 + ECAN02

Tools needed for installation

- LV-CAN200/ALL-CAN300
- Connection scheme (Please contact Teltonika Sales Representative and provide information about **vehicle manufacturer**, **model** and **year**.
- <u>ECAN02</u> (Used for contactless connection. If **two CAN lines** need to be connected, **ECAN02** must be used.)
- FM6300 device
- Pliers
- Quick splice connectors (If vehicle CAN bus wires are very thin CAN adapter wires should be connected directly)
- Plastic pry tool

• Zip ties

Installation steps

- 1. Follow the same **1**, **2**, **3** installation steps as with <u>LV-CAN200/ALL-CAN300 installation</u>.
- 2. Connect the appropriate CAN bus pair of wires between the CAN adapter and <u>ECAN02</u>:

If **CAN1 line** need to be connected as specified in the connection scheme:

- 1. Connect CAN adapter CAN1 L to CAN L of ECAN02.
- 2. Connect CAN adapter CAN1 H to CAN H of ECAN02.

If **CAN2 line** need to be connected as specified in the connection scheme:

- 1. Connect CAN adapter CAN2 L to CAN L of ECAN02.
- 2. Connect CAN adapter CAN2 H to CAN H of ECAN02.

➤ Do not swap CAN L and CAN H lines. Not all CAN adapter wires may be used in the vehicle.

- 3. Fasten <u>ECAN02</u> on vehicle CAN bus wires according to the connection scheme. Make sure CAN H and CAN L of vehicle corresponds to CAN H, CAN L markings on <u>ECAN02</u> PCB.
- 4. Connect CAN adapter **positive** and **ground** wires to the vehicle power supply lines or near FM6300 power wires.

► Do not swap power supply lines. Make sure that voltage does not exceed 30V.

5. Configure CAN adapter to read CAN bus data by setting its **program number** - <u>CAN Adapter</u> <u>configuration</u>

CAN Adapter Configuration

CAN Adapter program number selection

CAN Adapter must be set to program number which depends on the vehicle model. **Needed program number is always written on CAN Adapter mounting scheme.** In order to be able to enter program number in adapter **Software date of CAN adapter must be newer than connection scheme date**. CAN adapter Software date can be checked:

- Via <u>Teltonika Configurator→Status→CAN Adapter</u>
- Via SMS command lvcangetinfo

The number of digits required to enter correct Program No. may vary depending on the Software and manufacture date of your CAN Adapter:

- <u>LV-CAN200 adapter changes</u>
- ALL-CAN300 adapter changes

Entering via SMS command

Required conditions:

• CAN adapter properly connected to FM6300 device

CAN adapter program number can be set remotely, using SMS command. Send following **SMS command** to FM6300 device:

- If you have set SMS login and password: login pass lvcansetprog X
- If SMS login and password are not set leave two spaces before command: lvcansetprog X

Command example: lvcansetprog 11434 SMS response: LVCAN ProgNum: 11434

If during SMS command FM6300 was in following Sleep mode:

- <u>GPS Sleep</u> Program No. will be set immediately.
- <u>Deep Sleep</u> Program No. will be set after device wake up.
- <u>Online Deep Sleep</u> Program No. will be set immediately.

Entering via Teltonika Configurator

Required conditions:

• CAN adapter properly connected to FM6300 device

CAN adapter program number can be set via **Teltonika Configurator** \rightarrow **LVCAN** \rightarrow **Program Number**. When program number is entered press **Save to device** button that saves the entered program number into FM6300.

Entering manually

Required conditions:

- CAN adapter properly connected to FM6300 device
- Vehicle ignition must be ON

Depending on the used CAN Adapter, the length of the setup sequence will vary.

Steps to set program number:

```

Release SWITCH, if programming is successful LED will blink 10 times. |}

Send data with 0, if ignition is off

Depending on CAN Adapter I/O parameters and ignition status, FM6300 can send locked (last known) CAN Adapter I/O and active (real time) parameters values or reset values to 0. When ignition is off, CAN Adapter I/O parameters values sent to server are:

| CAN Adapter I/O element | Status | |
|-------------------------------|--------|--|

SMS Configuration

All CAN Adapter IO elements can be configured remotely via SMS commands.

SMS/GPRS Commands

CAN Adapters have several dedicated SMS/GPRS commands. SMS command structure:

<SMS login><space><SMS password><space><command><space><value>

SMS command <u>lvcangetinfo</u> example:

- If you have set SMS login and password: login pass lvcangetinfo
- If SMS login and password are not set leave two spaces before command: aclvcangetinfo

GPRS commands require <u>Codec 12</u> protocol.

For more SMS commands please see <u>SMS/GPRS command list</u>

| COMMAND | DESCRIPTION | RESPONSE |
|-----------------------|--|----------|
| lvcansetprog # | Set program number to CAN Adapter that is connected to FM6300. # - three digit number that identity vehicle. | Yes |
| lvcansimpletacho # | Add or remove simpletacho start byte. # - 0 or 1 (0 - don't add start byte, 1 - add start byte). | No |
| lvcangetprog | Get program number from CAN Adapter that is connected to FM6300. | Yes |
| <u>lvcangetinfo</u> | Get information about connected CAN Adapter | Yes |
| <u>lvcanclear #</u> | Clear Total Mileage (counted), Engine Work Time (counted), Fuel Consumed (counted) parameters values. # - parameter (0 - Engine work time (counted), 1 - Fuel Consumed (counted), 2 - Vehicle Mileage (counted)). | Yes |
| lvcanfaultcodes | Read DTC fault codes | Yes |

CAN Adapters receive data about the states of various systems within the vehicle, and send them as flags to FM6300. FM6300 device stores these flags in hexadecimal format, as one variable. Below is a list of kept flags and how to retrieve them.

The full list of state flags is stored only by:

• <u>ALL-CAN300</u>

| Property name | Size, bytes | Value bitmasks |
|---------------------|----------------|---|
| Control state flags | 4 | Byte0 (LSB): 0x01 - STOP 0x02 - Oil pressure / level 0x04 - Coolant liquid temperature / level 0x08 - Handbrake system 0x10 - Battery not charging 0x20 - AIRBAG 0x40 - EPS (Electric power steering) 0x80 - ESP (Electronic Stability Program) |
| | | Byte1: 0x01 - CHECK ENGINE 0x02 - Lights failure 0x04 - Low tire pressure 0x08 - Wear of brake pads 0x10 - Warning 0x20 - ABS 0x40 - Low Fuel 0x80 - Maintenance required |

LV-CAN200/ALL-CAN300 Important Information

Program Number logic change

Due to the growing number of supported cars, program numbers have exceeded "999". In order to maintain one number format, we are moving from 3-digit to 4-digit program numbers.

In new LV-CAN200/ALL-CAN300 firmware (from 2017-09-01) all program numbers that were up to 999 are changed to start from 1000. So that further program numbers would continue the counting with 4-digit numbers.

However, all existing program numbers stay the same, but "1" is added to the front. The device still understands the entered 3-digit program number (via SMS/GPRS), it will automatically add "1" before it. If you enter "247" - device number will turn into "1247". In Bootloader only 4-digit format is available, just add "1" to the front of the needed program number.

Example

When using older connection schemes where the program number displayed as 3-digit program number:

×

Using LV-CAN200/ALL-CAN300 Bootloader from soft version 2017-09-27 it is necessary to add "1" to the front of the program number:

×
