FMA202 Record storage

Main Page > EOL Products > FMA202 > FMA202 Configuration > **FMA202 Record storage**

- FMA202 can store up to 3500 data records if GSM or GPRS is not available at the moment. It will send data later when GPRS is available again. Note that FMA202 can have memory full of records. In such case it will start deleting oldest records in order to save new ones. Sending all the data records to server may take some time. Sending 3500 records for FMA202 may take for about 2 hours (exact time may differ depending on GPRS/server load).
- You can access all uploaded data from TAVL4 application.
- More details on how to use TAVL application please refer to "TAVL4 application user manual" documentation.
