

FMB130 Installation Photos

FMB130 is the device that has internal GNSS and GSM antenna. Device should be mounted with the sticker view to the open sky (metal free). FMB130 area with sticker is shown in figure below:

FMB1YX can be mounted under the plastic panel behind the front window, with the sticker direction to a window (sky). It is recommended to place FMB1YX behind dashboard as close to the window as possible. A good example of GNSS antenna placement is displayed in a picture below (area colored green).

SIM card should be inserted in the module while the connector is plugged off (while module has no power).
