FMB btgetlist

btgetlist command needs argument what list should be printed.
Example:
"btgetlist 0" device will respond with BT_LIST_Discovered.

Example:
"btgetlist 1" device will respond with all paired devices.

Example:
"btgetlist 2" device will respond with connected Bluetooth® device.

Example:
"btgetlist 3" device will respond with discovered Bluetooth® 4.0 devices.

 Note: Without argument it is always 0 i.e. BT_LIST_Discovered In FW 01.00.23 btgetlist (without args) will not respond (as the command is unknown).

 Note: If Non stop scan is enabled. Command won't be executed!
