

# Fleet Management platforms

## About

**Fleet management platform** - is a software system that provides centralized control and monitoring of a fleet of vehicles, enabling real-time tracking, route optimization, maintenance scheduling, and driver performance analysis to enhance operational efficiency and reduce costs. It is a critical tool for businesses and organizations that rely on a fleet of vehicles to streamline their operations and ensure optimal resource utilization.

**Telematics API platform** - is a software interface that allows developers to access and integrate telematics data and services into their applications or systems. It enables the exchange of real-time information from connected vehicles, such as location, vehicle diagnostics, and driver behavior, empowering businesses to develop custom solutions for fleet management, insurance, and other telematics-related applications.

## List of supported platforms
