

Iridium Edge

[Main Page](#) > [Accessories](#) > **Iridium Edge**

Iridium Edge features an all-in-one SBD module and antenna, with power supply. The plug-and-play satellite IoT terminal can be easily paired with FMB devices in order to expand their functionality to no **GSM coverage zones**. Current Iridium implementation offers ability to generate and send SBD records after set period after the GSM signal is lost. This ensures constant connectivity for the clients as Iridium network is available globally.
