## Disclaimer

#### ×

If you are not using Bluetooth, **please consider turning it off** or **change Bluetooth PIN** to remove potential risks.

If you are using Bluetooth® we strongly recommend **using AES encryption** for enhanced security.

# Sensors

### **Configuring Blue Puck/Coin sensor**

#### ×

Bluetooth® LE Blue Puck and Blue Coin sensors are disabled by default. Configurations to these sensors are written through NFC.

To do this download **Device Manager Mobile** by Ela from *Google Play Store* to your Android-powered device.

**Note!** Android-powered device that is used for configuring Blue Puck/Coin sensors must support NFC read/write functionality.

Follow these instructions to easily configure Blue Puck/Coin Bluetooth  ${\ensuremath{\mathbb R}}$  LE sensor:

• Enable Bluetooth® and NFC on your Android-powered device.

- Launch **Device Manager Mobile** on your Android-powered device.
- Select Configuration.
- Place your Android-powered device on top of Blue Puck/Coin sensor to scan it.

• Click *Enable* to allow Blue Puck/Coin sensor transmit advertising data. If it shows a tick, it is already connected to your phone.

- We recommend to set *Power* to 4 to get the best possible distance.
- Set *BLE Emit Period* to 1 seconds to get best possible sensor detection.
- Click Write button.

• Place your Android-powered device on top of Blue Puck/Coin sensor to write configuration to it. Once the configuration is written successfully, the Blue Puck/Coin sensor will be enabled and use the settings configured in the APP.

Make sure that *Manufacturer data mode* is Disabled, otherwise BLE sensor

will not be detected without additional changes in the device configuration.

# **Update Periods**

Update Periods —	
BLE Feature	
None	Backup Tracker
Sensors	
Update frequency	120 🗘
DIE Com duration	60 ^

#### **BLE Feature:**

None - Bluetooth® functionality will be disabled. Sensors - Enables Bluetooth® functionality for sensors. **Update frequency** – how often BLE scanning will run. **Scan duration** – how long scanning will be processed.

×

Type your **Blue Puck/Coin** MAC address in MAC field. You can check what is your MAC address by using <u>nRF connect for Mobile</u> app from *Google Play*.

- Configure the sensor fields according to the type of sensor used. More information about these settings can be found on <u>Blue Puck/Coin presets</u> section.
- After all these steps press Save to device to save configuration.

To check if the device has already received data from **Blue Puck/Coin** Bluetooth® LE sensor, follow these steps:

- Navigate toStatus section.
- Press I/O Info and look if BLE Temp has any values (depends on the type of sensor being used).

Status	c	/0												
Security		Input Name	Units	Priority			Low Level	High Level	Event (	lak		Operand		Ave Const
System		input realize	Contra S	Photog	_		 con cerei	ringir berei	LYCING	and a second	_	operano		Any const
GPRS		GNSS PDOP		None	Low	High	0 0	0 🗢	Yes	No		Monitoring	Ý	10 🗘
SMS \ Call Settings		GNSS HDOP		None	Low	High	0 0	0 🗘	Yes	No		Monitoring	~	10 🗘
GSM Operators		Speed	km/h	None	Low	High	0 0	0 🗘	Yes	No		Monitoring	Ý	1 0
Tracking		GSM Cell ID		None	Low	High	0 0	0 🗘	Yes	No		Monitoring	Ý	
Bluetooth		Battery Voltage	mV	None	Low	High	0 🗘	1 🗘	Yes	No		Monitoring	Ý	10 🗘
1/0		Active GSM Operator		None	Low	High	0 0	0 🗢	Yes	No		Monitoring	~	
		ICCID		None	Low	High			Yes	No		Monitoring	~	
		BLE Temp #1	°C	None	Low	High	239 🗘	245 🗘				On Entrance	~	
		015 Tomo #3	10	Nere	1	10-6	100 ^	200 ^				0.00		

To check if the device has already received data from **Blue Puck/Coin** Bluetooth<sup>®</sup> LE sensor, follow these steps:

- Navigate toI/0 section.
- configure BLE Temp section #1 if you only have one sensor configured.
- Set sensor priority High to immediately send a record.
- Select Temperature range (Low High)
- Select Operand:
  - $\circ$  On Entrance when temperature enters specified range, the device sends a record to the server.
  - $\circ$  On Exit when temperature exits specified range, the device sends record to the server.
  - $\circ$  On Both Sends a record when device enters or exits specified range.
  - $\circ$  Monitoring Performs the BLE scan when the device wakes up for periodic tracking action and sends the data to the server with the periodic record.

### **Record received to the Server**

- Device sent a record when it entered the range between 24 – 24.5 C  $\,$ 

#### ×

## **Blue Puck/Coin and EYE presets**

To read data from **Blue Puck/Coin and EYE** sensors, Sensor table must be configured with specified parameters to a particular sensor.

#### Using premade sensor presets

The configurator includes premade presets for sensors such as Blue PUCK/COIN MOV, MAG, T, RHT and etc.

# **Backup Tracker**

### **Introduction to Backup Tracker functionality**

TAT140 supports a feature which allows to work as backup tracker.

1. Even if Backup tracker is in alarm mode, device will continue to track its position as configured.

2. If FMBXXX device (Compatibility table) is turned off, Alarm event from the TAT140 will be

received and AVL 236 in the data packet will be sent.

### **Topology scheme**

×

## **Backup feature logic**

×

NOTE:	If TAT140 does not pick up advertised data packets from main tracker, TAT140 enters alarm state, generates and starts sending records with AVL ID 236 (Value 0).			
Param	eter Name	Description	ID	Value
BLE Fea	ature	Select which BLE feature is enabled. For Backup Tracker "Backup Tracker" feature has to be selected	189	0 - None 1 - Backup Tracker 2 -Sensors
Central	Device IMEI	IMEI of central device that TAT140 is connected	190	Valid IMEI number
Update	Frequency	Time in seconds for scanning intervals	1100	Min 5 sec. Max 66535 sec. Default 120 sec.
Scan Du	iration	Time in seconds for how long BLE scan will be running	1113	Up to 60 seconds (Not configurable)

### FIRMWARE (MODEM AND BLUENRG) INSTALLATION

Download Firmware and Configurator from **STABLE FIRMWARE** or **SHORT-TERM FIRMWARE** pages.

#### After device connection to Configurator:

- 1) Select Update firmware;
- 2) Select to flash Firmware(\*.e.XIM) file;
- 3) Click on file;
- 4) And select Open.

Wait until the device will upload the firmware.

×

#### When parameters successfully loaded:

- 1) Select Update firmware;
- 2) Select to flash BlueNRG firmware(\*.bin);
- 3) Click on file;
- 4) And select Open.

×

### Instructions

#### To ENABLE backup feature on TAT140 device:

- 1. Bluetooth®  $\rightarrow$  select Backup Tracker
- 2. Enter main device (FMBxxx/TFT100/TST100/GH5200/TMT250) IMEI
- 3. Set **Update frequency** to **3600** (s) We do not recommend to set values below **1800** sec. in this field, as it will shorten the battery life.
- 4. Configure your **APN** and Server settings in **GPRS** section.

#### <u>400px</u>

#### To ENABLE backup feature on FMBXXX/TFT100/TST100/GH5200/TMT250 devices:

1. Bluetooth  $\mathbb{B} \rightarrow BT$  Radio set to Enable(visible)

Security	General	
System	BT Radio	
GPRS	Disable	Enable (hidden)
Data Acquisition	Enable (visible)	
SMS \ Call Settings	Local Name	
GSM Operators	Local PIN	5555
Features	Security Mode	
Accelerometer Features	PIN only	PIN + MAC list
Auto Geofence	MAC list only	None
Manual Geofence		
Trip \ Odometer	Auto Connect To External Device	
Bluetooth	Connection Mode	

2. Bluetooth®  $4.0 \rightarrow Backup$  Tracker set to Enabled

# **DEVICE RECOGNITION CHECK USING TERMINAL**

#### • Debug mode:

Device is able to transmit its current state when connected to PC using USB cable. It is used to detect errors and provide information to possible solutions when operating as unexpected.

- 1. After launching terminal choose baud rate 115200 and hardware control none.
- 2. Select COM port which is assigned to "Virtual COM Port".
- 3. Click on 'Start Log' button and save a new file.
- 4. Then click 'Connect' to start receiving messages from device.

#### ×

Required Terminal application for log capturing can be downloaded here: Terminal

#### TAT140 terminal instructions:

1. Connect TAT140 to the computer and open it with Terminal as shown in example above. 2. When TAT140 recognizes the main tracker, a terminal will print a line as shown in example below: [2021.10.26 06:28:40] - [ASSET.UART] << Device MAC: 785ae3d1f9de IMEI 141fa7497ac1 Command 0 Sequence 24 Packet Cnt 5 3. When TAT140 cannot see the main tracker Terminal will print a line as shown in example below: [2021.10.26 10:50:03] - [ASSET.UART] << [2021.10.26 10:50:03] - [APP.TBT] ERROR! Amount of valid packets does not detect during this period! Triggering alarm
