Talk:FMB125 General description

Hi

I plan to use FMB125 to track device location via serial port, on an IOT controller used in buildings.

I read manual and have this question.

- On the serial port (RS232 or RS485), does FMB125 send standard NMEA sentences? - For both GPS and GLONASS modes, does FMB125 send same NMEA sentences towards host on serial port?

I need to implement the driver on host controller side based on this input and make design choice of GPS receiver.

Thanks and Regards Ragha
