

Telematics Configuration Tool (TCT)

[Main Page](#) > [Software & Applications](#) > **Telematics Configuration Tool (TCT)**

Telematics Configuration Tool (TCT) is a dedicated software for Teltonika Telematics device management. With just one application you are able to configure multiple hardware models in a timely and efficient manner, no matter whether you are a beginner or an experienced IoT professional.

TCT allows you to update device firmware, load and save configurations, perform device diagnostics, status checks, and debugging. It supports connection over a USB cable and has advanced tooltips allowing users to configure devices without any external user manuals.

Features Overview

While creating TCT, we learned a lot of lessons from a long history of [Teltonika Configurator](#), which helped us to significantly improve the user interface, optimize the settings structure, introduce search and filtering capabilities and implement auto-update functionality. Follow the links below to learn more.
