

Teltonika Configuration Tool

Teltonika Configuration Tool (TCT) is a new generation tool, that allows both beginner and advanced users to configure Teltonika devices quicker and easier.

The tool allows configuration via USB and Bluetooth® as the previous [Teltonika Configurator](#).

Main benefits of the new Teltonika Configuration Tool:

- New and improved user interface
- Device set-up feature, allowing beginner users to quickly prepare the device for deployment in the field.
- One tool to configure different Teltonika Telematics devices - the tool can be updated to support newly released firmware version or new devices
- Extensive tooltips and explanatory texts
- Search functionality allows user to find the exact feature without going through different menus
