

Template:FM36M1 General description

FM36YX is GNSS, LTE CAT M1, NB IoT terminal with backup battery for SPECIAL applications. FM36YX is designed for light vehicles tracking but also suitable for advanced applications like logistics, delivery services, utility transport and more. It is excellent for refrigerated transport, because this terminal has an extended input/output set and 1-wire interface for temperature monitoring. With Teltonika CAN adapters, FM36YX can be even used in agriculture or construction & mining. Moreover FM36M1 supports LTE CAT M1 and NB IoT, with additional GSM backwards compatibility, which makes this device usable with newest, cost efficient and most popular technologies. FM36M1 also has a USB port for device status log output and configuration.
