Supported Bluetooth OBD II dongle (ELM327 mini V2.1)

FMB module works with Bluetooth OBD II dongles which are based on ELM327 or STN1110 chips.

(ELM327 mini V2.1) In this particular topic we want to express whether tests have been performed with the OBDII ELM327 mini (V2.1) dongle, since the FMU130 has not been successful in trying to transmit the data using this device. This device only accept dongles ELM327 V1.4 at top of the line versions.
