User talk:JamilTero

Hi everyone Our client has the following requirements. He wants to get an alert whenever the vehicle leaves the allowed route. If you know how to configure the route on the device please assess me. The shape of the route will be complex, polygon, not a common shape like a circle or a rectangle. I prefer if I can send the command from my application. Note: I am ok with any device model which can satisfy this requirement. Thanks for your support
