[Main Page](#) > [Software & Applications](#) > [WEB Tacho](#) > **WEB Tacho Remote file synchronization**

## Remote file synchronization

All downloaded tachograph files (all formats) that are on the server can be synchronized with your FTP server.

To create file synchronization go to “Remote file synchronization” from the menu marked by *number 1* in the picture and press “**Add New**” marked by *number 2* in the picture.

In an open window, choose and type the necessary information.

ROW	DESCRIPTION
<b>Group</b>	Choose the group for which files will be synchronized
<b>Name</b>	Enter the name of synchronization
<b>Interval</b>	Defines interval of files validity which needs to be synchronized.
<b>Vehicle name</b>	Choose file name for synchronized files
<b>Host</b>	Enter FTP IP address
<b>Port</b>	Enter FTP Port
<b>Path</b>	Enter the path where files will be resent
<b>Tachograph file format</b>	Select in which format files will be downloaded
<b>User</b>	Enter the username/login for FTP
<b>New password</b>	Enter the password for FTP

When *Remote file synchronization* is configured, WEB TACHO server will connect to your FTP server and will create corresponding folders:

**Your entered the path, Group name, Client name, Vehicle name**, where tachograph files will be transferred.

**Note:** the last folder name depends on selected *Vehicle name* field. Folder can be named by *Vehicle name* or by *IMEI*.
