EYE APP errata

[EYE APP](#) > **EYE APP errata**

FOR EYE BEACON and EYE SENSOR DEVICES

EYE APP suitable for: [BTSID1](#), [BTSMP1](#)

EYE APP VERSION	FIRMWARE VERSION	RELEASE DATE	CHANGES
☒ **1.2.2-89**	<=[1.2.10 R4](#)	2023.11.30	**[New]:** • [Auto-Disconnect Timer](#): To enhance user privacy and save energy, we've introduced an auto-disconnect feature. After 2 minutes of inactivity, users will be automatically disconnected from the device. Before disconnection, you will have an option to maintain the connection. • [Customized Sensor Selection](#): Users can customize their device by selecting only the sensors they require. This allows users to specify which sensor information is read and advertised, ensuring power-efficient data collection and transmission. • [Visible battery voltage](#): Eye App now provides a readout of the battery's voltage level, keeping users informed about their device's battery status. • [Search device with QR scan](#): Android users can now utilize their phone's camera to effortlessly look for devices by scanning MAC or UUID from QR codes or barcodes, speeding the process. • [12 character name](#): Users can now assign names of up to 12 characters, enabling them to configure their device with a full MAC address as the name. • The minimum advertising interval has been changed to 1 second. **[Fixed]:** • Improved Disconnection Handling - unexpected disconnections are now displayed and managed correctly. Users will no longer experience crashes or errors when configuring a disconnected device. • Unsuccessful firmware updates no longer force devices into hibernation. Instead fails the update. • Other stability improvements
☒ **1.2.0-63**	<=[1.2.8.R.2](#)	2023.04.21	**[Fixed]:** • Sensor information will not update after saving configuration until the user connects at least once.

| **1.2.0-60** | <=[1.2.8.R.2](#) | 2023.03.29 | [New]: |

1.2.0-60   <=1.2.8.R.2   2023.03.29

[New]:
• **Change PIN functionality:** Users can now change the PIN of their device directly from the app, making it easier to secure their device.
• **Download configuration functionality:** Users can now download configurations from their device to the app, making it easier to manage multiple configurations.
• **Firmware revision representation:** Users can now view the firmware revision of their device in the app, helping them to keep their device up to date.
• **Saving configuration has loading screen:** A loading screen has been added to let users know when their configuration has been successfully saved.
• **Removal of Advanced Settings:** Sensor Event configuration: This feature has been removed to simplify the app interface.
[Fixed]:
• Android 13 devices can now download the app without any issues.
• We've corrected the display of NamespaceID and InstanceID when not connected to their device.
• We've fixed a bug that caused their PIN to change accidentally when connecting to their device repeatedly.
• Bluetooth® permissions are now working correctly, ensuring a seamless connection with their device.
• Firmware update issues for Huawei phones have been resolved.
• Links from the side menu now work as expected.
[Known Issues]:
• Sensor information will not update after saving configuration until the user connects at least once. This issue will be fixed in the next EYE app version that should release soon.
• [1.2.8.R.2](#) firmware version devices are shown as [1.2.8.R.1](#). This issue is not EYE APP issue, it is firmware related and therefore will be fixed with a future firmware update.
