

FMA202 GSM settings, GPRS part

[Main Page](#) > [EOL Products](#) > [FMA202](#) > [FMA202 Configuration](#) > **FMA202 GSM settings, GPRS part**

GPRS defines main parameters for FMA202: GSM operator APN and GPRS username and password (optional – depending on the operator), destination server IP and port, and allows to set protocol used for data transfers – TCP or UDP.

Some operators use specific authentication for GPRS session – CHAP or PAP. If any of these is used, APN should be entered as ‘chap:<APN>’ or ‘pap:<APN>’. I.e. if the operator is using APN ‘internet’ with CHAP authentication, it should be entered as ‘chap:internet’. Information about APN and authentication type should be provided by your GSM operator.
