			Min	Max		
1010	Uint8	-	0	1	0 - From oldest 1 - From Newest	Sorting
1011	Uint32	-	0	259200	Seconds	Active Data Link Timeout
1012	Uint8	-	0	300	Seconds	Server Response Timeout

⚠ ATTENTION! Some GSM operators may disconnect the device from an active data link if the device doesn't send any data for a very long time, even if active data link timeout is set to maximum value. The amount of time that an operator keeps the link open depends solely on the operator. For example, if active data link timeout is set to maximum, 259200 seconds (72 hours), and the device sends data to server every 86400 seconds (24 hours), the operator might disconnect the link earlier and the device will have to connect to the server anew. This may cost extra, depending on the operator GPRS data charge. It is strongly recommended, when using active data link timeout, that data sending to the server should not be very rare (24 hours or more). If data sending is more frequent, then the operator will not disconnect the device from the server.
