

FMM125 Sleep modes

[Main Page](#) > [Professional Trackers](#) > [FMM125](#) > [FMM125 Manual](#) > **FMM125 Sleep modes**

There are four sleep modes: GPS sleep, Deep sleep, Online Deep sleep and Ultra Deep sleep mode.

□

Contents

- [1 GPS Sleep mode](#)
- [2 Deep Sleep mode](#)
- [3 Online Deep Sleep mode](#)
- [4 Ultra Deep Sleep mode](#)

GPS Sleep mode

FMM125 is able to go into GPS sleep mode if such mode is enabled.

Sleep mode timeout starts counting when device is in STOP mode. After timeout is reached and all conditions for GPS sleep mode are met, the device goes into sleep mode. When in GPS sleep mode, FMM125 turns GPS module off and continues making new periodic records. As a result power usage decreases, in turn saving vehicle battery.

FMM125 will enter GPS sleep mode if ALL of these conditions are met:

- FMM125 is configured to work in GPS Sleep mode and sleep timeout is reached;
- Device time must be synchronized with GPS satellites. From Firmware 03.18.15 version, this condition depends on "Records saving/sending without TS" parameter:
 - After Position Fix - FMM125 time is synchronized with GNSS satellites and GPS fix is obtained;
 - After Time Sync - FMM125 time is synchronized over NTP, NITZ or GNSS satellites;
 - Always - FMM125 will enter sleep mode without time synchronization and GPS fix.
- Movement is not detected by the accelerometer or configured movement source;
- Ignition (configured ignition source) is off;
- There are no SMS messages being received.

On Firmware version older than 03.18.15, the device time has to be synchronized with GNSS satellites and GPS fix has to be obtained in order for the device to enter GPS Sleep mode.

FMM125 exits GPS sleep mode if ONE of following conditions is true:

- Movement by accelerometer or configured movement source is detected;
- Ignition (configured ignition source) is turned on.

Deep Sleep mode

While in deep sleep mode, FMM125 sets the GNSS receiver to sleep mode and turns off GSM/GPRS module (hence it is not possible to wake up device via SMS). Despite records with last known coordinate being saved and sent to AVL server (GSM/GPRS module is turned on to send data and then it is turned off), power usage is decreased to save vehicle's battery. Please note that power saving depends on two configurable parameters: *Send Period* and *Minimum Record Saving Period* in "X on Stop Mode". When records are sent successfully in deep sleep mode, open link timeout counter will be skipped and FMM125 will enter deep sleep mode immediately.

Because a lot of functions are disabled in deep sleep mode following I/O elements are disabled from records that are generated in this mode: GSM Signal, GNSS Status, GNSS PDOP, GNSS HDOP, GSM CellID, GSM Area Code, Active GSM Operator, Trip Odometer, Total Odometer, Speed, Fuel Rate GPS, Fuel Used GPS and ICCID. FMM125 can enter deep sleep mode if ALL of these conditions are met:

- FMM125 is configured in Deep Sleep mode and sleep timeout is reached;
- Device time must be synchronized with GPS satellites. From Firmware 03.18.15 version, this condition depends on "Records saving/sending without TS" parameter:
 - After Position Fix - FMM125 time is synchronized with GNSS satellites and GPS fix is obtained;
 - After Time Sync - FMM125 time is synchronized over NTP, NITZ or GNSS satellites;
 - Always - FMM125 will enter sleep mode without time synchronization and GPS fix.
- Ignition (configured ignition source) is off;
- Movement is not detected by the accelerometer or configured movement source;
- *Min. Record Saving Period* ([Data Acquisition Mode settings](#)) must be larger than *Open Link Timeout* parameter, so that FMM125 could close GPRS link;
- The difference between *Send Period* ([Data Acquisition Mode settings](#)) and *Open Link Timeout* must be more than 90 seconds, so that FMM125 could close GPRS link within at least 90 seconds;
- There are no SMS messages being received;
- Data socket(s) are closed;
- Data sending is not in progress;
- FOTA is not in progress.

On Firmware version older than 03.18.15, the device time has to be synchronized with GNSS satellites and GPS fix has to be obtained in order for the device to enter Deep Sleep mode.

FMM125 exits deep sleep mode if ONE of following conditions is true:

- Movement by accelerometer or configured movement source is detected;
- Ignition (configured ignition source) is turned on.

Online Deep Sleep mode

In this mode the device works as in deep sleep mode, but without deregistering from GSM network. GSM part stays powered so this increases power consumption. In this mode device should send/receive SMS and make/accept calls. It does not close GPRS context if one was previously

opened. Conditions to enter online deep sleep mode are the same as entering deep sleep mode. FMM125 exits online sleep mode if ONE of following conditions is true:

- Movement by accelerometer or configured movement source is detected;
- Ignition (configured ignition source) is turned on.

Ultra Deep Sleep mode

Conditions to enter ultra deep sleep mode, where GPS and GSM modem are turned off and device functions are suspended for maximum battery saving, are the same as entering deep sleep mode. FMM125 exits ultra deep sleep mode only when DIN1 and movement are detected by accelerometer. Movement source and Ignition source configuration is not taken into account in this case.
