Trip Settings

Trip section offers user to configure the *Trip* feature. *Trip* starts when Ignition according *Ignition source* is ON and Movement according *Movement source* is ON and also 'Start Speed' is exceeded. *Start Speed* defines the minimum GPS speed in order to detect *Trip* start.

Ignition OFF Timeout is the timeout value to detect *Trip* end once the Ignition (configured ignition source) is off.

I/O Trip Odometer must be enabled to use *Distance counting mode* feature. When it is set to **Continuous**, *Trip* distance is going to be counted continuously (from *Trip* start to *Trip* end) and written to I/O *Trip Odometer* value field. When *Trip* is over and the next *Trip* begins, *Trip Odometer* value is reset to zero.

When *Mode* is set to **Between Records**, the distance is going to be counted between every record made. This value is written to I/O *Trip Odometer* value field and is reset to zero every new record until the *Trip* ends. If later all Odometer values are summed up manually, the distance driven during the whole duration of the *Trip* can be obtained.

Advanced Trip Settings

The image shows a software window titled "Advanced Trip Settings". It contains two settings: "Eco Score allowed events" with a numeric input field set to "10" and a "Remember iButton" section with two buttons, "Disable" (highlighted in blue) and "Enable" (grey).

Advanced trip settings allow configuring a number of *Eco Score allowed Events* per 100 km and enabling/disabling iButton remembering functionality.

I/O Eco score must be enabled to get the value onto the server. Eco score is dependent on overspeeding, Eco/Green driving (harsh acceleration, braking, cornering), excessive idling and high RPM events (latter one requires OBD BT dongle). If less of parameters/scenarios are activated - it is easier to have higher Eco score. ECO scoring is differentiated by separate Trips.

There are six Eco evaluation events:

- Harsh acceleration.
- Harsh braking.
- Harsh cornering.
- Over-speeding (will only count events with value 1 (start) and ignore value 0 (end)).
- Excessive Idling (will only count events with value 1 (start) and ignore value 0 (end)).
- High RPM.

Eco score value can range from 10 (excellent) to 0.00 (very bad):

- Excellent 8.00 - 10
- Good 6.00 - 7.99
- Not Good 4.00 - 5.99
- Bad 2.00 - 3.99
- Very Bad 0 - 1.99

How Eco score is rated:

- Eallowed - ECO Score Allowed Events
- d - trip distance traveled in KM
- Egen - Total generated events

ECO score calculation example:

Example 1

Example 2

When Total events < 1 , we ignore the formula and then Eco Score is equal to 10.

- ✗ If *Eco Score Allowed Events* value is configured as 0, then Eco score can have only two values: 0 (when total events > 0) or 10 (when total events = 0).
- ✗ Score is updated every 1 km driven or every 5 minutes of *Trip* duration.
- ✗ Do not forget to activate "Eco score" in I/O section.
- ✗ If RPM is enabled under OBD and LVCAN - events will be doubled.

Remember iButton functionality. If *Remember iButton* and *Trip* parameters are enabled, ignition is on and iButton is attached then FMP100 remembers iButton ID. iButton ID is saved and sent to the server with every record. If new iButton is attached during the *Trip*, FMP100 remembers new iButton ID. FMP100 forgets iButton ID after ignition is off and ignition timeout is reached.

Odometer

Calculation Source allows to choose Odometer calculation source between **GNSS**, **OBD**. *Odometer Value* sets the starting total odometer value.

Private/Business Mode feature will allow for FMP100 users to mask and secure privacy while using business vehicle for personal uses during not working hours.

Private/Business Mode

Private/Business Mode

Private/Business Mode events can be **Disabled** or be enabled by choosing between **Low**, **High** or **Panic priority**.

Eventual records

Eventual Records

By selecting **Disabled** Private/Business mode status will be included in each record.

By selecting **Enabled** Private/Business mode status will appear only when status of mode will be changed.

Triggers

Triggers

In order to manually select between Private or Business mode for FMP100 device, 4 different sources can be selected, which can be combined together:

BTAApp - by using smartphone with Teltonika mobile application, the Private/Business mode can be selected from it.

Note: Trip scenario must be enabled!

NBL-1 Button1 - NBL-T RFID reader first button.

NBL-2 Button2 - NBL-T RFID reader second button.

FMP100 Button - by configured Keyboard part, the physical FMP100 button can be used to choose trip mode.

GPS Data Masking

GPS Data Masking

While the Private mode is active, the GPS location can be shown by selecting **Normal** or can be masked:

Data sent as Zero means record will not include coordinates and will be set to be zeros.

Last good known location means records include last known coordinates which were received during Business Mode.

Odometer calculation

Odometer calculation

By selecting **Disabled** the driven distance during Private Mode will not be included to Total Odometer.

By selecting **Enabled** the driven distance during Private Mode will be included to Total Odometer.

Deactivate by

Deactivate by

Towing detection	Unplug detection
Crash detection	Autogeofence

In order to not lose location when important events occur, the Private mode can be automatically deactivated by **Towing detection**, **Unplug detection**, **Crash detection** and **Autogeofence**, which can be combined together at the same time.

Trigger Type

Trigger Type

External	Weekly Schedule
----------	-----------------

Trigger types can be chosen between **External**, which will be by configured Triggers or **Weekly Schedule**, where Private mode can be automatically enabled by predefined time periods during week in additionally appearing Weekly Schedule Settings window.

Weekly Schedule Settings

In order to set automatic mode changes between Private or Business modes, the whole week can be manually preconfigured. By default device is using the GMT+0 time zone. In order to match time zone where FMP100 device is located, the time zone can be modified.

Daylight saving

Weekly Schedule Settings

Time Zone GMT+00:00

Daylight Saving Settings

Daylight saving

Disable		Enable		
	Week	Day	Month	Time
Start on	First	Monday	January	00:00
End on	First	Monday	January	00:00

Some countries are using summer and winter times, where time is changed two times per year. In order to automatically match changed times without changing configuration of FMP100 device, the Daylight saving can be **Enabled** and configure the **Start on** and **End on** points by configuring the **Week**, **Day**, **Month** and **Time**.

If Daylight saving is not needed or FMP100 device is used in countries where time doesn't change, the option can be **Disabled**.

Weekly Schedule

Weekly Schedule

Workday	Status		Start	End
Monday	<input checked="" type="checkbox"/> Disable	<input type="checkbox"/> Enable	00:00	00:00
Tuesday	<input checked="" type="checkbox"/> Disable	<input type="checkbox"/> Enable	00:00	00:00
Wednesday	<input checked="" type="checkbox"/> Disable	<input type="checkbox"/> Enable	00:00	00:00
Thursday	<input checked="" type="checkbox"/> Disable	<input type="checkbox"/> Enable	00:00	00:00
Friday	<input checked="" type="checkbox"/> Disable	<input type="checkbox"/> Enable	00:00	00:00
Saturday	<input checked="" type="checkbox"/> Disable	<input type="checkbox"/> Enable	00:00	00:00
Sunday	<input checked="" type="checkbox"/> Disable	<input type="checkbox"/> Enable	00:00	00:00

Here is possibility to select on which week day the Private mode should be automatically enabled and in which hour period.
