Supported devices (FM63, FMB630) Add Keyword: Add the security keyword to prevent the reconfiguration of your device. The device after unsuccessful 5 attempts of keyword inserting is blocked. | |

My configuration version which I'm trying to upload does not match my device

A Configuration file must be developed by Firmware version & Teltonika device. If an incompatibility error pops up, a Firmware & Hardware difference must be happening

Make sure to find the correct configurators version and Firmware versions according to your project:
[FM Configurator versions](#)

Make sure the new configurator version matches your device firmware branch.

How Do I know my configuration is saved?

1. Save the configuration to file first to the device by pressing **Save** button
2. Save configuration file to your computer by pressing **Save to file** button.
3. Press the **Load** button in the device.

Where Can I get the latest Teltonika Configurator Versions?

If after pressing **Load** button configuration did not change, it means it was saved successfully.

Find the optimal Teltonika Configurator versions in the link provided. If the version you require is not available on the Configurator versions page, contact your sales representative.
