FOTA WEB supports various tasks that require files to be used (Update configuration, update firmware, upload TLS certificate...). The files section on FOTA WEB is used to manage all your files for easy and quick use with the task system.

Files (1)					Upload
<input type="text" value="Search"/>		File type ▼		< 1 > Table view	
<input type="checkbox"/>	Name	Description	File type	Company	Created at
<input type="checkbox"/>	Configuration.cfg	Imported at 2023-06-13 07:12:26	Configuration	Edgaras.L	2023-06-13 10:12:27
					 

Files section

This section displays files that have been uploaded to FOTA WEB by a user. There are three possible file types: Firmware, Configuration and Certificate.

FIELD NAME	VALUE	DESCRIPTION
ID	String: ID	Shows the ID number of the uploaded file.
DESCRIPTION	String: description; default: N/A	Description shows user-defined explanation for this file. In case of configuration download from the device – it shows “From device”.
NAME	String: file name	Exact filename of uploaded file. In case of configuration download from device – it includes IMEI + Unix timestamp.
FILE TYPE	<ul style="list-style-type: none">• Firmware• Configuration• Certificate	Shows whether the file is firmware, configuration, or certificate.

COMPANY	String: Company name	Shows to which company this file is assigned. If a file is assigned to a child level company – then only that particular company and its root level company can utilize this file.
CREATED AT	String: date and time	It shows when the file was uploaded to the FOTA WEB. Date/Time is adjusted by the browser according to the time of local PC.
SIZE	String: size	Shows the uploaded file's size.

Upload

Upload menu allows to select a **Company** and assign Firmware, Configuration, or Certificate files to it.

FIELD NAME	DESCRIPTION
File type	Allows user to select, if the file being uploaded is Firmware, Configuration, or Certificate.
Company	Select which company the uploaded file will be assigned to.
Description	Ability to add a user-defined description about the file being uploaded. In case it is left empty, it will show the import date. NOTE: Non-mandatory field.

Availability of files for task creation

Depending on the company and its place in the hierarchy, the file uploaded by this company (FW, configurations, etc.) will have a different access range.

Let's imagine that we have the following hierarchy of companies:

- A (parent company)
 - B (child company of A)
 - C (child company of A)
 - D (child-child company of C)

In this case, depending on which company the file was uploaded to, the following options will be available for creating tasks:

- A can create task for B with A file (straight downwards);
- A can create task for D with C file (straight downwards);

Delete

Delete menu allows the user to delete selected files from the FOTA WEB. The files that should be deleted can be selected by just adding a checkmark next to them, filtering them,

or listing the ID's of the files in a .csv file.

NOTE: Scenario files can **not** be deleted from the FOTA WEB files menu.

NOTE: configuration files that were downloaded via **Devices -> Create task -> Receive configuration** shall appear in **FILES** tab.

Configuration files can be **downloaded** to your PC from **FILES** menu. Configuration files can be opened only with the FM configurator.

Download

While viewing the Files section you are able to download any of the already uploaded files for usage within your system.

To download you should locate your file from the list and click on the **Download Button**

Edit

Edit menu allows the user to edit the information of a selected file from the list on FOTA WEB.

The editable fields are *Company* that the file is under and *Description*.
