

Registration Details

[Main Page](#) > [EOL Products](#) > [MSP500](#) > [MSP500 Configuration](#) > **Registration Details**

A number of new parameters and IO elements which describe registration details were introduced.

All available parameters ID's is obtained here: [Registration details parameters list](#)

The new parameters shown in Registration details table are configurable in a new tab called "Registration details" which is located on the configurator sidebar. These can be configured by a regular user indefinite amount of times, while the simple user can only change them once. If a regular user changes these values (enters something), then the simple user can not change them anymore.

These details are used for displaying & printing of the records see [SMS/GPRS commands for printing commands](#) as well as sending them to server.
