Talk:Example case study

Hello Guys

Can we use FMB920's accelerometer values to identify a possible tyre theft? A logic like one angle out of other two in accelerometer is changed for a particular period of time we can assume that the thief has raised the car on a jack to pull the tyre out? I found a similar feature on an Indian product, pumeguard.com. They seems like using similar idea to get this alert.

2G

Does anyone know how to set this device to use 2G?
