  - 3.2 Triggers and others
- 4 FMS Eco Driving Report Structure
- <u>5 FMS Eco Driving AVL ID List and description</u>
- 6 Parameter list

## **Description**

Overall purpose of FMS ECO Driving is to monitor drivers behavior by reading FMS CAN data from the truck and sending a report to the server which allows the fleet manager to see the driving style of specific drivers - good driving styles can be rewarded, and bad driving styles can be corrected. Good driving style means that the driver is using the whole spectrum of trucks capability - engine breaking (retarder), coasting, cruise control etc. and is predicting the road/traffic conditions ahead using the momentum of the truck when needed, not overusing the brakes etc.

The main benefit for the client is that FMS ECO Driving report allows them to make and monitor driver behavior changes to save fuel costs and maintenance cost of the truck - saving more revenue and making the company more environmentally friendly.

Additionally, clients can also reduce the data traffic of the device and save data cost as well - instead of monitoring live FMS data from the trucks - new functionality accumulates the data inside the device and sends a report by specified triggers/period.

**Note:** 01.03.01.rev.114 Firmware is needed for FMS Eco Driving functionality.

## **Notion List**

**Cruise control** - selectable option in the truck - by using cruise control the truck can use optimal fuel consumption to maintain the speed window selected by the driver. https://wiki.teltonika-gps.com/view/File:Cruise Control.mp4

 $\textbf{ECO Roll -} option that if enabled in truck uses neutral gear to roll using truck momentum on slopes \\ \underline{\text{https://wiki.teltonika-gps.com/view/File:EcoRoll.mp4}}$ 

**Coasting -** similar to ECO Roll, however the Cruise Control is not active and gear is not neutral - simply letting off the accelerator pedal.

https://wiki.teltonika-gps.com/view/File:Driver Support Score.mp4

**Power take-off (PTO)** - is a device that transfers an engine's mechanical power to another piece of equipment.

https://wiki.teltonika-gps.com/view/File:PTO.mp4

**Retarder -** A hydraulic accessory that is connected to a gearbox which slows down the truck by slowing down the gearbox. It is operated by levr in the truck.

https://wiki.teltonika-gps.com/view/File:Retarder1.mp4 https://wiki.teltonika-gps.com/view/File:Retarder2.mp4

## FMS eco driving functionality working

#### Units

Driver behaviour can be monitored via various accumulators - Distance travelled in specific state and/or Fuel used in specific state and/or Time spent in specific state. Additionally count accumulator is also available for specific elements.

Client can select what accumulator is required to him by enabling it in configurator. For example, Braking Accumulator:

In report you can get:

- distance travelled while brake pedal was depressed
- fuel used while brake pedal was depressed
- time in seconds of how long the brake pedal was depressed during the trip
- count number of times the brake pedal was depressed

**Example:** report states that Braking accumulator count is 10 while distance travelled while brake pedal was depressed is 2 km - the driver is feathering the brake to slow down the truck instead of using engine braking.

**Important:** IO elements appear in record if the trigger that generated the event is enabled for the element - for example report is generated by trip end - periodical accumulators will not be included in the record and vice versa. However - more than one trigger can be selected.

## **Triggers and others**

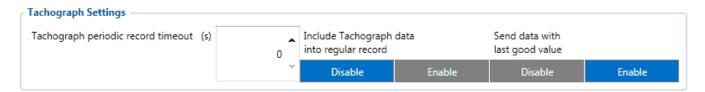

As mentioned, - FMS ECO driving is a report-based functionality - purpose is to get a report on drivers' behaviour after each trip he takes and not to monitor the data while the trip is happening, however a possibility for that also exists. Some Triggers are hardcoded, for example:

- **Startup** Permanent trigger. Generated on device start-up. Indicates that accumulation has begun.
- **Powerdown** Permanent trigger. Generated on device reset command. Intended for saving current accumulators to Flash on software reset.
- **DriverID** Permanent trigger. Generated on active driver ID change detection. Changing driver ID should always send current accumulators so that they would not be assigned to another driver. Two reports are sent on this trigger: one before accumulators are reset (to get a report for the previous driver) and one after (to get a reference starting point for a new driver).

• **EndOfDay** - Permanent trigger. Generated every 24h near midnight. Event is triggered in time interval from 23:56 to 00:00. All accumulators are sent and cleared.

Clients can also select additional triggers for each element - Trip/Periodic:

- **Periodic** Configurable trigger. Only accumulators that have "Periodic" setting configured are sent and cleared. Generated after every periodic Tacho record generation (separate period configuration will be available in upcoming release).
- Tachograph Record Settings in "Tachograph Data" Tab:

- **Trip Start** Configurable trigger. Only accumulators that have "Trip" setting configured are sent and cleared. Generated on trip start.
- **Trip End** Configurable trigger. Only accumulators that have "Trip" setting configured are sent and cleared. Generated on trip end.

Trip Settings from "Trop/Odometer" Tab

## **FMS Eco Driving Report Structure**

FMS report comes in separate record with specific **AVL ID - 12000**. The value of AVL ID specifies what trigger generated the report.

After each FMS ECO Driving report is generated - the accumulators are renewed - counting starts from zero.

The record structure description could be found **HERE** 

## FMS Eco Driving AVL ID List and description

All enabled elements have their specific AVL IDs - Braking Accumulators shown before are configurable with same Parameter ID, but all have specific AVL IDs. Full list can be found **HERE** 

			0 - Periodic 1 - Trip Start 2 - Trip End	
Event Type	125000	12000	3 - Driver change 4 - Device startup 5 - Device off / reset	1B

Event IO ID

## Parameter list

To configure via SMS/GPRS commands FMS ECO driving functionality you can find all parameters IDs [ **HERE**]

#### **Coasting Accumulators**

Coasting Accumulators - feature that calculates elements when driver lets off accelerator pedal. The Report can include:

Units	<b>Extra Triggers</b>	Ranges
<b>Distance</b> - distance travelled while accelerator pedal was left off	<b>Periodic</b> - Generated after every periodic Tacho record generation	Fuel rate (L/h) - Fuel rate threshold for coasting pattern to be detected
<b>Fuel</b> - fuel used while accelerator pedal was left off	<b>Trip</b> - Generated on Trip start or Trip end.	<b>Torque (%)</b> - Engine Torque threshold for coasting pattern to be detected
<b>Time</b> - time in seconds of how long the accelerator pedal was left off.		<b>Speed (km/h)</b> - Speed threshold for coasting pattern to be detected

#### **EcoRoll Accumulators**

*EcoRoll Accumulators* - feature that calculates elements when vehicle use gravity to roll in neutral. The Report can include:

#### Units

**Distance** - distance travelled while vehicle was rolling in neutral

Fuel - fuel used while vehicle was rolling in neutral

**Time** - time in seconds of how long the vehicle was rolling in neutral.

## Extra Triggers

**Periodic** - Generated after every periodic Tacho record generation

**Trip** - Generated on Trip start or Trip end.

#### **Cruise Control State**

**Disable** - When disabled coasting pattern is detected when fuel rate or Engine torque is below EcoRoll pattern to be detected certain range.

**Enable** - When enabled coasting pattern is detected when vehicle is on neutral gear.

#### Ranges

Fuel rate (L/h) - Fuel rate threshold for

Torque (%) - Engine Torque threshold for EcoRoll pattern to be detected

Speed (km/h) - Speed threshold for EcoRoll pattern to be detected

## **Braking Accumulators**

*Braking Accumulators* - feature that calculates elements when brake pedal was depressed. The Report can include:

#### Units

**Distance** - distance travelled while vehicle's brake pedal was depressed

Fuel - fuel used while brake pedal was depressed.

**Time** - time in seconds of how long the brake pedal was depressed during the trip.

**Count** - number of times the brake pedal was depressed.

#### Extra Triggers

**Periodic** - Generated after every periodic Tacho record generation

**Trip** - Generated on Trip start or Trip end.

#### **Retarder Accumulators**

*Retarder Accumulators* - feature that calculates elements when retarder in a vehicle is operated. The Report can include:

#### Units

**Distance** - distance travelled while vehicle's retarder was operated

**Fuel** - fuel used while vehicle's retarder was operated

**Time** - time in seconds of how long the retarder was operated.

#### Extra Triggers

**Periodic** - Generated after every periodic Tacho record generation

Trip - Generated on Trip start or Trip end.

#### **Cruise Control Accumulators**

*Cruise Control Accumulators* - feature that calculates elements when vehicle is on cruise control. The Report can include:

#### **Units**

**Distance** - distance travelled while vehicle was on cruise control.

Fuel - fuel used while vehicle was on cruise control

**Time** - time in seconds of how long the vehicle was on cruise control.

#### Extra Triggers

**Periodic** - Generated after every periodic Tacho record generation

**Trip** - Generated on Trip start or Trip end.

## **Torque Accumulators**

*Torque Accumulators* - feature that calculates elements on engine's workload. The Report can include:

#### **Units**

# **Distance** - distance travelled while vehicle's torque is detected

**Fuel** - fuel used while vehicle's torque is detected.

**Time** - time in seconds of how long the vehicle's torque is detected.

#### **Extra Triggers**

**Periodic** - Generated after every periodic Tacho record generation

**Trip** - Generated on Trip start or Trip end.

#### Ranges

**Accelerator pedal position (%)** - Pedal position percent for Torque pattern to be detected.

#### **PTO Accumulators**

PTO Acumulators - feature that calculates elements on PTO event. The Report can include:

#### Units

**Distance** - distance travelled on PTO event.

Fuel - fuel used while on PTO event.

**Time** - time in seconds of how long the PTO event lasted.

#### **Extra Triggers**

**Periodic** - Generated after every periodic Tacho record generation

Trip - Generated on Trip start or Trip end.

## **Fuel While Driving Accumulators**

Fuel While Driving Acumulators - feature that calculates fuel while driving. The Report can include:

#### **Units**

## Extra Triggers

Fuel - fuel used while driving.

**Periodic** - Generated after every periodic Tacho record generation

**Trip** - Generated on Trip start or Trip end.

#### **Fuel While Idle Accumulators**

Fuel While Idle Acumulators - feature that calculates fuel while vehicle is idle. The Report can include:

#### **Units**

Fuel - fuel used while vehicle is idle.

**Periodic** - Generated after every periodic Tacho record generation

**Trip** - Generated on Trip start or Trip end.

#### **Fuel Consumption Under Load Accumulators**

Fuel Consumption Under Load Acumulators - feature that calculates fuel consumption under load The Report can include:

> **Units Extra Triggers** Ranges

Fuel - fuel used while vehicle is under load.

Periodic - Generated after every Engine Load (%) - Engine load periodic Tacho record generation

Trip - Generated on Trip start or Trip end.

#### **Total Accumulators**

Total Accumulators - feature that calculates elements total values. The Report can include:

#### Units Extra Triggers

**Distance** - Total calculated distance during the trip

Fuel - Total fuel used during the trip

**Time** - Total calculated time during the trip

Periodic - Generated after every periodic Tacho record generation

threshold for Engine load to be

**Trip** - Generated on Trip start or Trip end.

detected.

## **Number of Stops Accumulators**

Number of stops Acumulators - feature that calculates Number of stops during the trip The Report can include:

> Units Extra Triggers Ranges

Count - Number of stops during the trip.

**Periodic** - Generated after every **Brake time (s)** - Braking time periodic Tacho record generation

threshold for number of stops to be detected.

Trip - Generated on Trip start or Trip end.

## **Number of Parking Brake Accumulators**

Number of Parking Brake Accumulators - feature that calculates total number of parking brakes. The Report can include:

#### **Units**

#### Extra Triggers

Count - Number of total parking brakes Periodic - Generated after every periodic Tacho record generation

**Trip** - Generated on Trip start or Trip end.

#### **Number of Harsh Acceleration Accumulators**

Number of Harsh Acceleration Accumulators - feature that calculates total number harsh acceleration.

The Report can include:

#### Units

## Extra Triggers

 $\textbf{Count} \text{ - Number of total parking brakes } \frac{\textbf{Periodic}}{\text{generation}} \text{ - Generated after every periodic Tacho record }$ 

**Trip** - Generated on Trip start or Trip end.

## **Number of Harsh Braking Accumulators**

Number of Harsh Acceleration Accumulators - feature that calculates total number of harsh braking during trip

The Report can include:

#### **Units**

## Extra Triggers

**Count** - Number of total parking brakes

**Periodic** - Generated after every periodic Tacho record generation

**Trip** - Generated on Trip start or Trip end.

## **Number of Harsh Cornering Accumulators**

Number of Harsh Cornering Accumulators - feature that calculates total number of harsh cornering during trip

The Report can include:

#### **Units**

## Extra Triggers

**Count** - Number of total parking brakes

Periodic - Generated after every periodic Tacho record generation

**Trip** - Generated on Trip start or Trip end.

### **Speed Range Accumulators**

Speed Range Accumulators - feature that calculates selected unit during certain speed ranges. The Report can include:

#### Units

#### Extra Triggers

#### Ranges

**Distance** - Distance traveled when speed was on a set speed range.

**Periodic** - Generated after every periodic Tacho record generation

Speed ranges (km/h) - range boundaries in km/h separated by "," for "Speed Ranges" IO's Each number determines the start of a new range. Values should come in ascending order and should not repeat.

**Fuel** - Fuel used on a trip when **Trip** - Generated on Trip start speed was on a set speed range or Trip end.

Time - Total calculated time during the trip on a set speed range.

#### **RPM Range Accumulators**

RPM Range Accumulators - feature that calculates selected units during certain RPM ranges. The Report can include:

#### Units

## **Extra Triggers**

#### Ranges

**Distance** - Distance traveled when speed was on a set speed range.

Periodic - Generated after every periodic Tacho record generation

**Fuel** - Fuel used on a trip when **Trip** - Generated on Trip start

speed was on a set speed range or Trip end.

Time - Total calculated time during the trip on a set speed range.

**RPM ranges (rpm)** - range boundaries in (rpm) separated by "," for "RPM Ranges" IO's Each number determines the start of a new range. Values should come in ascending order and should not repeat.

#### **Torque Range Accumulators**

Torque Range Accumulators - feature that calculates selected units during certain Torque ranges. The Report can include:

#### Units

## Extra Triggers

### Ranges

**Distance** - Distance traveled when speed was on a set speed range.

**Periodic** - Generated after every periodic Tacho record generation

**Torque ranges (%)** - range boundaries in % separated by "," for "Torque Ranges" IO's Each number determines the start of a new range. Values should come in ascending order and should not repeat.

**Fuel** - Fuel used on a trip when **Trip** - Generated on Trip start speed was on a set speed range or Trip end.

Time - Total calculated time during the trip on a set speed range.

#### **Braking Range Accumulators**

Braking Range Accumulators - feature that calculates selected units during certain Braking ranges. The Report can include:

#### Units

## Extra Triggers

#### Ranges

Braking ranges (%) - range

boundaries in % separated by

"," for "Braking Ranges" IO's

Each number determines the start of a new range. Values

and should not repeat.

should come in ascending order

**Distance** - Distance traveled when speed was on a set speed range.

**Periodic** - Generated after every periodic Tacho record generation

**Fuel** - Fuel used on a trip when **Trip** - Generated on Trip start speed was on a set speed range or Trip end.

**Time** - Total calculated time during the trip on a set speed

#### **Fuel Rate Range Accumulators**

range.

Fuel Rate Range Accumulators - feature that calculates selected units during certain fuel rate ranges.

The Report can include:

**Units** 

**Extra Triggers** 

Ranges

**Distance** - Distance traveled when speed was on a set speed range.

Fuel - Fuel used on a trip when Trip - Generated on Trip start speed was on a set speed range or Trip end.

Time - Total calculated time during the trip on a set speed range.

**Periodic** - Generated after every periodic Tacho record generation

Fuel Rate ranges (L/h) - range boundaries in L/h separated by "," for "Fuel Rate Ranges" IO's Each number determines the start of a new range. Values should come in ascending order and should not repeat.
