Devices stopped reporting

Hi, we have more than 20 FMB120 devices installed in different vehicles. They were reporting for more than 20 days, but a few days ago, most of them stopped sending information, accumulating data in memory. The sims have already been validated with the telephone company and are functioning correctly. The device configuration is apparently ok. We configure new devices and they work correctly. Could you help us solve this problem? Thank you. [Ggigante](#) (talk) 14:57, 29 October 2019 (EET)
